	Cholesterol	HDL Cholesterol	Direct LDL	Triglycerides
Desirable	< 200	40-60	100-129	< 150
Borderline High	200 - 239	-	130-159	150 - 199

Very High			>190	> 500

Cholesterol level for Person with CHD <150mg/dL, With High BP, Diabetes, Smoking <180mg/dL

The treatment goal for non-HDL-C is usually 30 mg/dL above the LDL-C treatment target.

For example, if the LDL-C treatment goal is <70 mg/dL, the non-HDL-C treatment target would be <100 mg/dL.

* LDL level is primary goal for treatment and varies with risk category and Assessment.

* Risk assessment from HDL and Triglyceride has been revised. Also LDL goals have changed.

VITAMIN B12 ASSAY			

Vitamin B12 Level

200 - 2000

ECL, Serum

Vitamin B12 is a cofactor for the conversion of methylmalonyl Coenzyme-A to succinyl CoA. In addition, B12 is a cofactor in the synthesis of methionine from homocysteine, is implicated in the formation of myelin, and along with folate, is required for DNA synthesis.

The cause of vitamin B12 deficiency can be three type: Nutritional deficiency, Malabsorption Syndromes and other gastrointestinal causes.

B12 deficiency can cause Megaloblastic Anemia(MA)(serum level is usually <100 pg/mL), nerve damage, and degeneration of the spinal cord. Lack of B12, even mild deficiencies, damages the myelin sheath that surrounds and protects nerves which may lead to peripheral neuropathy.

The nerve damage caused by a lack of B12 may become permanently debilitating if the underlying condition is not treated. People with intrinsic factor defects who do not get treatment eventually develop a Megaloblastic anemia called Pernicious anemia(PA).

The relationship between B12 levels and Megaloblastic Anemia is not always clear in that some patients with MA will have normal B12 level; conversely, many individuals with B12 deficiency are not afflicted with Megaloblastic anemia. Despite these complication, however, in the presence of Megaloblastic anemia (eg; elevated MCV) there is usually serum B12 or folate deficiency.

A serum B12 level below the normal expected range may indicate that tissue B12 levels are becoming depleted. A condition that is associated with low serum B12 levels includes:- iron deficiency, normal near-term pregnancy, vegetarianism, partial gastrectomy/ileal damage, celiac disease, oral contraception, parasitic infestation, and advancing age.

* Therapeutic intake during preceding days - (oral- 3 days, parenteral 3 wk.) may lead to an increased level
